

MIT AITI
Problem Set 6 – Introduction to Android
Due: Jul 12, 2012 4pm

1. “Hello World”

Develop a simple hello world Android app using instructions from:
<http://developer.android.com/training/basics/firstapp/index.html>

2. Layout Prototype for your project

Design layout(s) that are suitable on a mobile device for your project idea using the Android layout controllers. You are encouraged to discuss with your team members how the layout should look like, but you should work on the prototype individually. You only need to modify the **resources** in your Android project on Eclipse, and you are **not** required to implement any Java code for this exercise. But we recommend that you try it out if you have the time! ☺

Submission:

Please put your Eclipse Android projects in folders named “1” and “2” respectively, and zip them together in a zip file named “lab6.zip”. Submit your lab6.zip in the dropbox.
